Movable Shelving System

Kardex Systems introduces a multi-purpose movable shelving system created to meet the filing and storage needs of today's offices and facilities economically and efficiently... Kompakt movable shelving.

**Redesigned** to deliver maximum high-density storage in minimal floor space.

**Engineered** to meet the weight-load and space requirements of almost any storage or filing application.

**Manufactured** to provide long-term reliability and low maintenance.

**Slim-profile** end panels eliminates wasted space and increases storage capacity on every tier of shelving.

## Kompakt<sup>®</sup>

### Movable Shelving System

**NEW** slim-profile end panels optimize space utilization. Available in 100+ decorative finishes including heavy-gauge structural steel or high/low-pressure laminate.

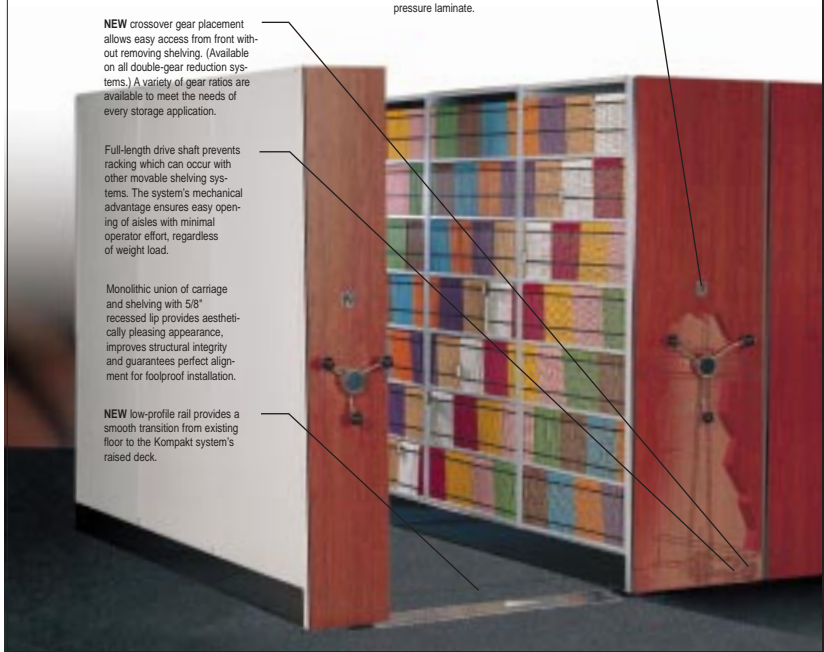

Positive-lock safety mechanism allows occupied aisles to be locked open for operator protection.

**NEW** crossover gear placement allows easy access from front without removing shelving. (Available on all double-gear reduction systems.) A variety of gear ratios are available to meet the needs of every storage application.

Full-length drive shaft prevents racking which can occur with other movable shelving systems. The system's mechanical advantage ensures easy opening of aisles with minimal operator effort, regardless of weight load.

Monolithic union of carriage and shelving with 5/8" recessed lip provides aesthetically pleasing appearance, improves structural integrity and guarantees perfect alignment for foolproof installation.

**NEW** low-profile rail provides a smooth transition from existing floor to the Kompakt system's raised deck.

## Two Heavy Duty Wheel & Rail Designs

**Low-Profile Double-Flanged**

True 5" diameter wheels throughout are fitted with permanently-lubricated pillow block wheel bearings which deliver smooth, consistent performance with no maintenance requirements.

**Low-Profile Center-Flanged**

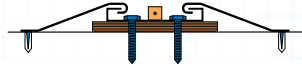

Complete size flexibility with system heights from 4" to 12"; carriage lengths from 3" to 60"; and carriage depths from 1" to 5" with single or double-entry shelving.

## Other Double-Flanged Rail Options

### Rail Ramp System

maintains existing floor covering without modification.

### Sub-floor System

can be carpeted or tiled to the top level of the rail.

### Concrete-embedded System

provides flush installation in new construction.

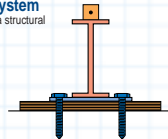

### Modular Deck

offers non-permanent installations for leased quarters.

### Structural Rail System

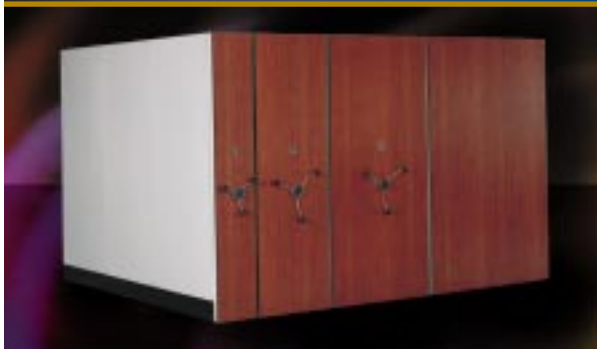

allows rail to be used as a structural support member.

## Movable Shelving System

Choose from  
five low impact  
handle designs

Kompakt Movable Shelving can be locked closed for added security.

**Optional Information and Materials Management System Software.** IMMS Software from Kardex is a complete information and materials management software package designed to increase productivity and control any type of storage application.

Offering all the convenience and features of standard Windows applications, this Y2K compliant software allows you to track the location of any file stored in a Kompakt movable shelving system and to generate a complete audit trail of file activity. The program is also available with add-on modules for security management, I.D./location management, archive management, time management and networking.
